

Exercice 1

1) Calculer l'aire de la chambre :

$$A = 2,8 \times 5 = 14 \text{ m}^2$$

2) Calculer l'aire de la salle de bains :

longueur : $10 - 5 - 0,2 - 0,2 - 0,1 = 4,5$

$$A = 2,8 \times 4,5 = 12,6 \text{ m}^2$$

3) Calculer la longueur du mur oblique du bureau :

$$x = \sqrt{6^2 + 3,4^2} = 6,9 \text{ m}$$

4) Calculer l'aire du bureau :

$$A_1 = 6 \times 1,8 = 10,8$$

$$A_2 = \frac{6 \times 3,4}{2} = 10,2$$

donc $A = 10,8 + 10,2 = 21 \text{ m}^2$

Exercice 2

Calculer la hauteur de l'immeuble :

TOA

$$\tan 30^\circ = \frac{h}{70}$$

$$h = 70 \times \tan 30^\circ = 40,4 \text{ m}$$

Exercice 3

Calculer l'angle α :

TOA

$$\tan \alpha = \frac{5}{10}$$

$$\alpha = \arctan\left(\frac{5}{10}\right) = 26,6^\circ$$

Exercice 4

Calculer le volume du container

$$V_1 = 7 \times 8 \times 5 = 280 \text{ m}^3$$

$$V_2 = 4 \times 4 \times 5 = 80 \text{ m}^3$$

$$V = 280 + 80 = 360 \text{ m}^3$$

Exercice 5

Calculer la hauteur de l'immeuble :

10		2
82		h

$$h = \frac{2 \times 82}{10} = 16,4 \text{ m}$$
